

Series L9 UL489 Miniature Circuit Breakers

Industrial Circuit
Breakers for Branch
Circuit Protection
up to 63 Amps

Sprecher+Schuh includes a line of circuit breakers approved for branch circuit applications in the United States and Canada and certified as a Miniature Circuit Breaker for IEC applications.

Broad product range & flexibility

The Sprecher + Schuh L9 Miniature Circuit Breakers provide a variety of product configurations by offering current ranges of 0.5A to 63A with voltage ranges of 240V AC and 480Y/277V AC. The Series L9 DIN Rail-mounted circuit breakers are similar in width and current range to supplementary protectors with the added benefit of providing listed branch circuit protection for US/Canada applications.

Also available for control circuit applications are add-on auxiliary and signal contacts plus shunt trip modules to provide modern control circuit applications. A lock-off attachment is available for applications requiring that feature.

Safety features provide enhanced protection

The series L9 Miniature Circuit Breakers feature finger-safe IP20 from the front of the circuit breaker to guard against accidental contact with live parts.

To aid troubleshooting, a color-coded indicator provides positive visual indication of the device status (green for OFF, red for ON and isolation function).

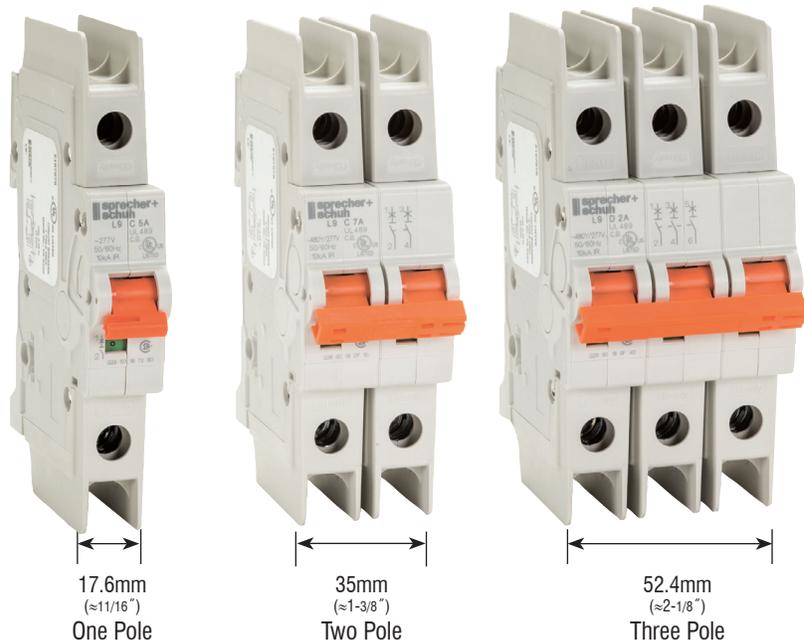

The Series L9 also incorporate a trip free mechanism - ensuring that the device operation cannot be defeated by holding the operator in the ON position.

Easy installation

The Series L9 Miniature Circuit Breakers mount on a standard 35mm DIN-rail. Wire terminals accept multiple conductors. In addition, power to the circuit breakers can be fed from the line or load side.

Global approvals for worldwide acceptance

The Sprecher + Schuh L9 Circuit Breakers are UL489 listed, CSA 22.2 No. 5.1 approved and meets IEC 60 947-2. The Series L9 also have an HACR rating (heating and air conditioning) as well as a "Switching Duty" (SWD) rating from 0.5 to 20A. Switching Duty ratings are related to fluorescent light applications only, not High intensity discharge (HID) lights or any other types of loads. Advanced features and global approvals make the Series L9 an ideal product for use in industrial equipment installed throughout the world.

See online white paper

Methods of Applying Circuit Protection

Product Design & Application

The Series L9 products are thermal-magnetic (inverse time) circuit breakers offering the benefits of a modern circuit breaker design in a compact size. The L9 is used mainly in control circuit applications where branch circuit approved circuit breakers are required.

Because of its range of protection (from 0.5 to 63A) many customers may use this product for protection of load devices where fuses or other supplementary protector devices previously were used in the U.S. and Canada.

Protection of PLC I/O, solenoids, power supplies and control transformers along with providing the listed branch circuit protection is available in one device.

Description

L9 Circuit Breakers for Branch Circuit protection are available in one (1-), two (2-), and three (3-) pole construction and are rated 0.5 to 63A at 240V AC and 0.5 to 40A at 480Y/277V AC for North American applications (UL

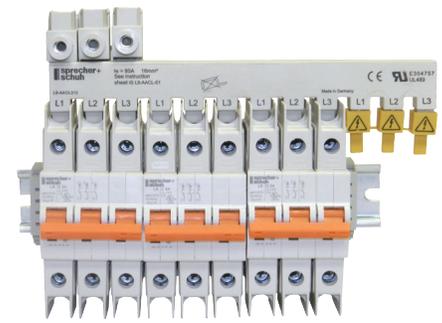

489 and CSA 22.2 No. 5.1). For IEC applications, the products are rated 415V AC 0.5 to 40A.

Continuous Current Rating

Standard current ratings are: 0.5A, 1A, 1.6A, 2A, 3A, 4A, 5A, 6A, 7A, 8A, 10A, 15A, 16A, 20A, 25A, 30A, 32A, 35A, 40A, 50A, 60A and 63A.

The L9 circuit breakers are rated in RMS amperes at 40°C (104°F) ambient temperature per the UL 489 (CSA 22.2 No. 5.1) standard. This temperature is generally used as the average temperature within an industrial enclosure. If a circuit breaker is applied in a temperature that exceeds 40°C (104°F) ambient, then the circuit breaker should be derated. For IEC 60 947-2 standard, the products carry an ambient rating of 30° C. Follow standard IEC application considerations for temperature rating in different ambient temperatures.

Detailed characteristic trip curves are shown in our online white paper, Methods of Applying Circuit Protection. The trip bands shown for each breaker represent current tripping limits for a circuit breaker and are within the limits established

by UL. For a specific current at 40°C (104°F), a circuit breaker will open (“clear the circuit”) automatically at some total time that will be within the “Minimum” and “Maximum” time shown on the curves.

Example: The L9 time-current graph on page M28 shows that a one-pole, 15 A, L9 circuit breaker trips in not less than 10 sec, and not more than 120 sec. on a 30 A current. Because the UL standard defines this time spread, users should not specify exact tripping time. The lower current portion of the curves (upper left) depict the time to trip due to thermal action and reflect overload protection of the wire and connect load. The higher current portion of the curves (lower right) depicts the trip due to the magnetic action of the circuit breaker and reflects protection due to short circuit level currents.

Compare these advanced features

- Box lug terminals accept #18...#4 AWG wire as standard
- Current limiting and interrupting capacity of 10kA at 480Y/277V AC.
- Amp rating and trip curve characteristic clearly marked on the device for easy identification.
- Trip-free mechanism; device operation cannot be defeated by holding the operator in the ON position
- Available in one, two and three pole
- Line and load side terminals designed with dual terminals which allows the connection of two wires, or both a wire and a bus bar.
- Guarded No.2 pozidrive terminal screws with finger-safe IP20 protection
- Accepts right-mounted shunt trips, auxiliary and signal contacts.
- Devices install on standard 35mm DIN-rail (EN 50022)
- Color coded indicator provides visual indication of the device status and isolation function
- Magnetic trip elements provide Type C and D trip characteristics (IEC and EN 60947-2), while bimetallic elements protect against slight overloads.

Applying L9 UL489 Miniature Circuit Breakers in accordance with UL & NEC Guidelines

The L9 circuit breakers are rated in RMS amperes at a 40 °C (104 °F) ambient temperature per UL 489/CSA C22.2 No. 5. This temperature is used as the ambient temperature external to an industrial enclosure. If a circuit breaker is applied in a temperature that exceeds the 40 °C (104 °F) ambient rating, then the circuit breaker should be derated using the table below. For IEC 60947-2 standard, the products carry an ambient rating of 30 °C. Follow standard IEC application considerations for temperature rating in different ambient temperatures.

Note: Application below 0° C is for non-condensing atmosphere. Care should be taken for applications below 0 °C. These devices are not certified to operate correctly in the presence of ice.

Temperature Derating, UL Reference temperature = 40 °C

Tripping Characteristics

C Curve

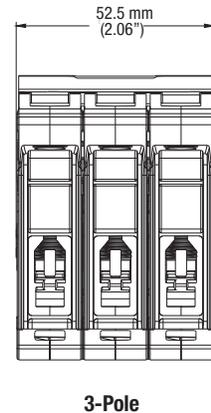

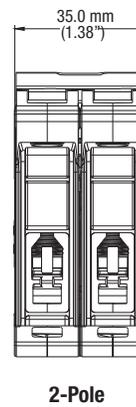

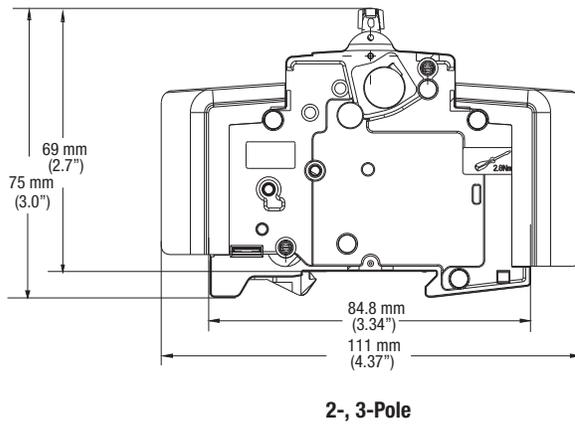

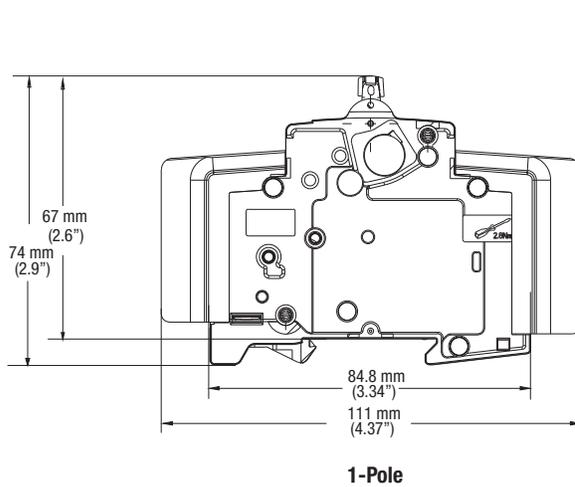

D Curve

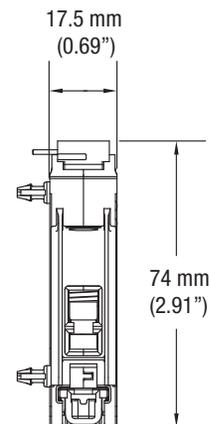

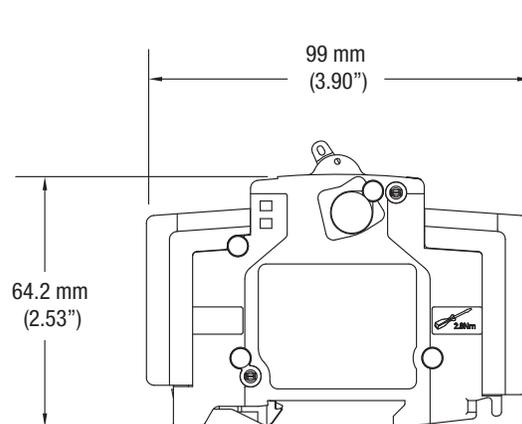

L9 Circuit Breakers

L9 Miniature Circuit Breakers (Series B...Curve C & D)

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

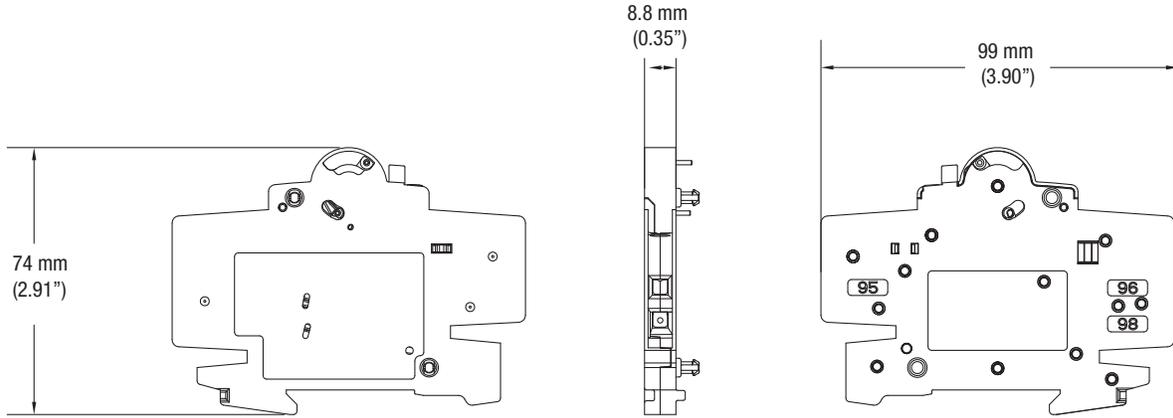

Shunt Trip (L9-AMST1, -AMST2)

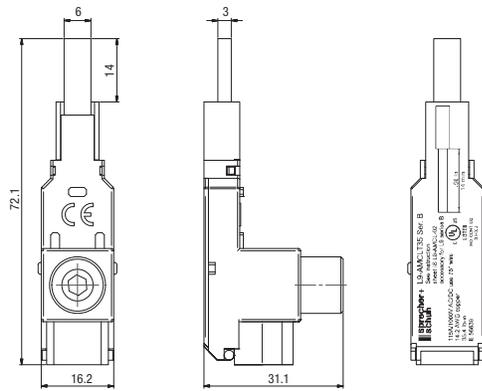

Signal Contact (L9-AMRS3) and Auxiliary Contact (L9-AMRA3)

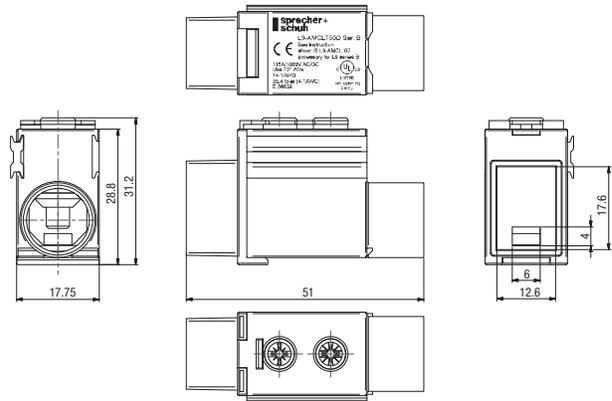

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

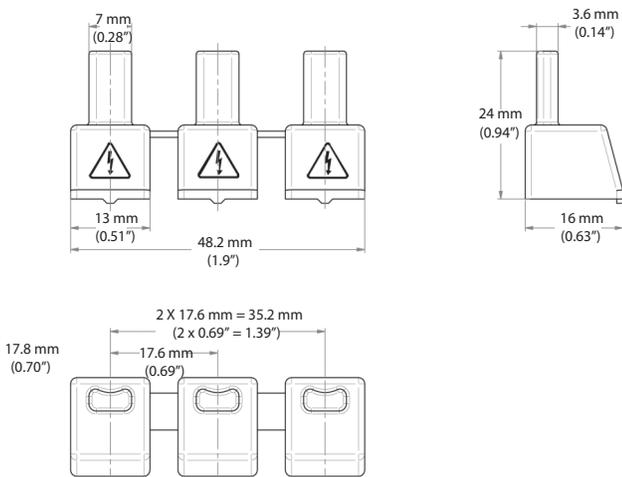

L9-AMCLT35 - Terminal Lug

L9-AMCLT50D - Power Feed

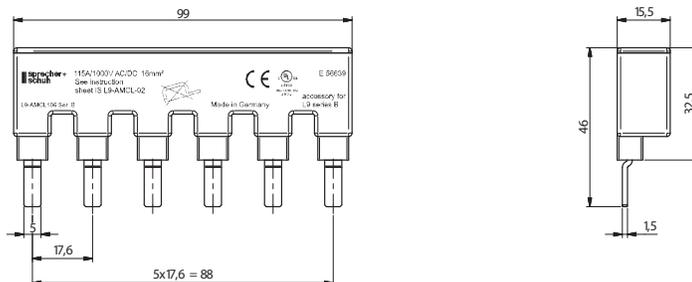

L9-AMCLPS - Protective Cover

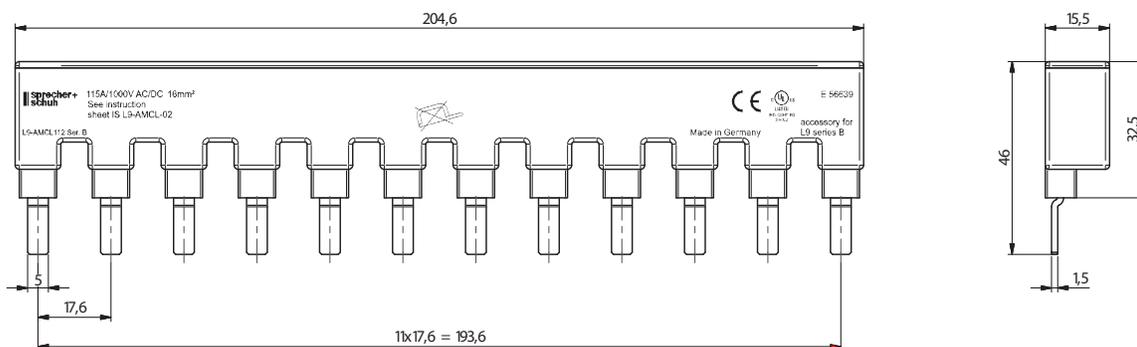

L9 Circuit Breakers

L9 -AMCL_06 - 6 Pole Bus Bars

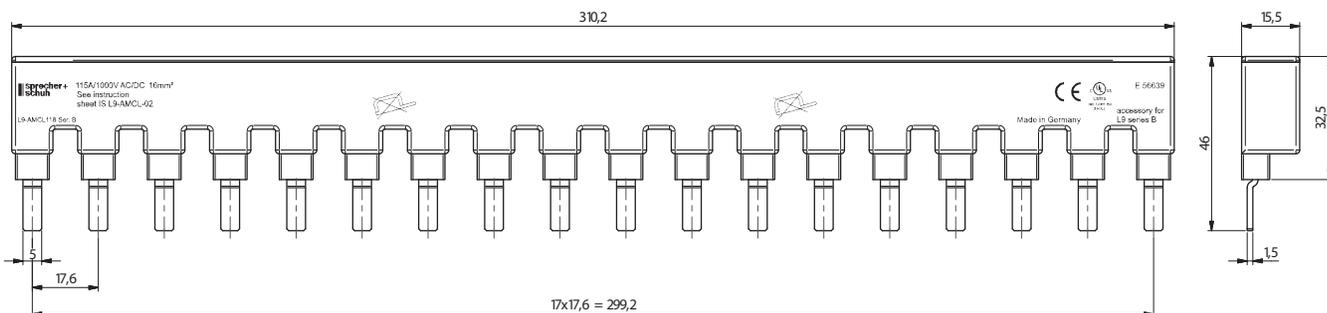

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

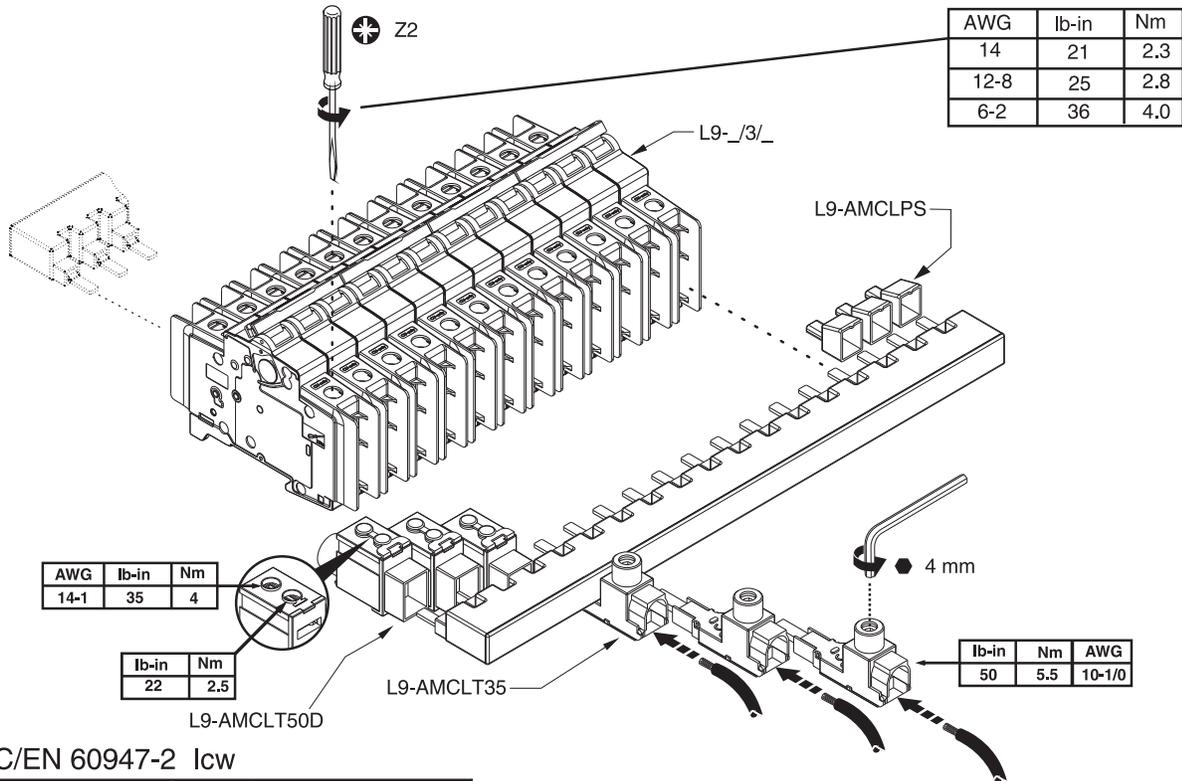

L9-AMCL_12 - 12 Pole Bus Bars

L9-AMCL_18 - 18 Pole Bus Bars
